

Prescription Details

Based on the symptoms of redness in eyes, watery eyes, and blurred vision in a 19-year-old female, the possible condition could be conjunctivitis (commonly known as pink eye). Here's a potential prescription to address these symptoms:

1. **Artificial Tears (Lubricating Eye Drops):**

- Dosage: 1-2 drops in each affected eye every 4 to 6 hours as needed for symptom relief.

2. **Antihistamine Eye Drops (e.g., Ketotifen):**

- Dosage: 1 drop in each affected eye twice daily.

3. **Cold Compress:**

- Apply a cold compress over the closed eyes for 5-10 minutes, 3-4 times a day to reduce redness and swelling.

If symptoms persist or worsen, it's important for the individual to consult with a healthcare provider for further evaluation and to rule out more serious conditions.
